

## AR106 and AR109 Mounting Rail Adjustability

Rail to rear frame can be adjusted to 6 positions when setting up the cabinet. The forward most position includes a threaded PEM nut for rapid installation. The other 5 mounting positions require the use of a square cage nut at the top and bottom of the frame to mount the vertical mounting rail into position.

Rails can be adjusted from their forward most mounting position 50mm (1.9in) MIN to rearmost mounting position 329mm (12.9in) MAX

73mm (2.8in) – Threaded PEM nut for rapid installation

113mm (4.4in) – Square mounting hole requiring cage nut.

153mm ( 6 in) – Square mounting hole requiring cage nut.

249mm ( 9.8in) – Square mounting hole requiring cage nut.

289mm ( 11.3in) – Square mounting hole requiring cage nut.

329mm ( 12.9 in) – Square mounting hole requiring cage nut.

The vertical mounting rail features a slotted hole allowing for infinite adjustment of 0 to 23mm (0.9in) at each position.
